Species Combos!

All Star Combo is a 12' x 12' garden consisting of our most requested pollinator plants. In addition to the 20 plants in this garden, a planting diagram and instructions are provided. Refer to the plant legend for the plants included in this stunning garden. The previous pages provide a description and picture of the plants.

Spence Restoration Nursery

Plants sold by the Jennings County SWCD are produced by Spence Restoration Nursery in Muncie, Indiana.

They provide high quality nursery-propagated native plant material for the restoration of native plant communities and the creation of environmentally sound natural landscapes.

The network of roots is spread throughout the container with no encircling tendencies. The 2 3/8" square by a 3 3/4" deep open bottom pot allows production of a healthy root system that spreads rapidly into the soil after the transplanting. Open bottom pots allow water to move freely into and out of the pot.

Guaranteed true to type and in good condition at pickup time. If for some reason your choice of plant is not available we will refund the purchase price.

**Order deadline is
March 16, 2018**

Plants

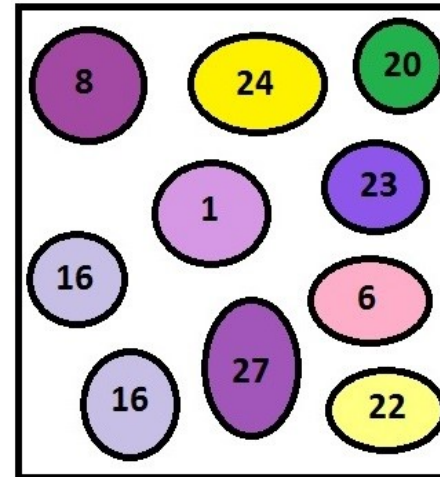

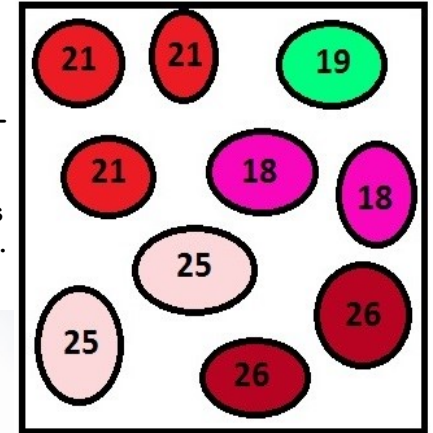

Butterflyweed is most often a distinctive bright orange but there is some variation in flower color, from deep red-orange to yellow. The leaves are somewhat narrow, up to 1" and tapered, with no stem. This is a great milkweed for a sunny location in a dry area blooming from June through August. Mature plants can make as many as 20 stems at an average height of 2'. The vivid orange color, low mounded profile, and ability to attract and sustain butterflies make this plant a well-known favorite for all types of gardens.

Common Milkweed is one of the easiest and fastest to establish of the milkweeds. This is the preferred species for Monarch butterfly populations. This 3' plant does well in clay soils with full sun to partial shade. The large flower can vary in color from nearly white to deep pink-purple. The fragrance is very delicate and pleasing and numerous native pollinators will benefit during its long bloom time of June through August.

Species Combos!

Hummingbird Combo is a 5' x 5' garden of must have plants for hummingbirds! In addition to the 10 plants in this garden, a planting diagram and instructions are provided. Refer to the plant legend for the plants included in this versatile garden. The previous pages provide a description and picture of the plants.

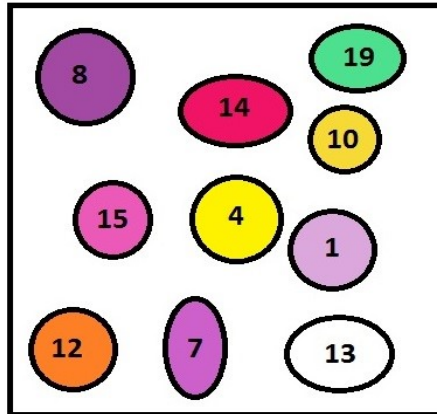

Honey Bee Combo is a highly sought after 5' x 5' garden for honey bees! In addition to the 10 plants in this garden, a planting diagram and instructions are provided. Refer to the plant legend for the plants included in this versatile garden. The previous pages provide a description and picture of the plants.

Species Combos!

Monarch Combo is a 5' x 5' garden with plants that Monarch Butterflies love! In addition to the 10 plants in this garden, a planting diagram and instructions are provided. Refer to the plant legend for the plants included in this versatile garden. The previous pages provide a description and picture of the plants.

Plants

Marsh Milkweed has a lovely vanilla fragrance you detect coming from large rosy pink flowers possibly hosting several Monarch or Swallowtail butterflies. This deer-resistant plant grows in moist to average soils with full sun to partial shade. The plant grows 3-6' tall and blooms in July and August. Later, large pods form which will break open to reveal seeds that will float away in the wind.

Whorled Milkweed has very skinny, "whorled" leaves. There are clusters of approximately 20 flowers near the top of each plant. Whorled Milkweed can bloom anytime between July and September. The white flowers can be a greenish-white on some plants. When the Whorled Milkweed is mature it reaches a height around 2'. Whorled Milkweed is deer and rabbit-resistant that does well in dry soils with moderate shade.

Plants

Meadow Blazing Star is a 5' tall butterfly magnet. The purple blossoms occur in August and September. The flowers appear all at once along stems and last for many weeks in the late summer. This plant prefers full to partial sun in moist soil conditions.

Prairie Blazing Star matures to 4' in wet to medium soil conditions. It grows best in full sun to partial shade, and pink blooms occur in July, August, and September. It makes an excellent cut flower. When it begins to bloom it starts at the top and works its way down. This is an excellent species to plant in perennial gardens since butterflies, bees, and hummingbirds are attracted to it all summer.

Stiff Goldenrod thrives in full to partial sun and can reach 4' tall. This plant grows in moist to dry soil conditions. The yellow blooms occur in August to October. This is a very important plant for fall foraging pollinators because most other plant life is shutting down.

Grasses

Little Bluestem is a 3' warm season grass that actively grows during the summer when soil temperatures are warm. It is very drought-tolerant but it can do well in moist situations. Blue-green in the summer and, after the first frost, it will turn a beautiful coppery pink that will remain all winter. A must have in any medium to dry site.

Prairie Dropseed is a great choice of grass for your native landscape. It has a wonderful tussock-forming growth habit and takes on a nice golden hue all throughout the fall and winter. It excels in hot, dry conditions, to 3' high, where it can really soak up the sun. This grass tolerates moist to dry soil conditions. The seeds of this species, which drop in the fall, are a great food for seed eating birds.

Plants

Blue Wild Indigo grows to 4' tall in moist soil conditions. Preferring full to partial sun, blue blooms occur in May through July. This plant spends the first few years developing below ground. The branching foliage and blooms become showier each year.

Bergamot is an easy growing plant that reaches 4' in height. It prefers full to partial sun in moist to dry soil conditions. Purple blooms appear in July through September. It has a distinctively aromatic foliage. Bergamot is a favorite of butterflies, bees and hummingbirds!

Lance-leaf Coreopsis is a 2' tall plant that prefers dry soil conditions. Yellow blooms appear in May through August. This plant thrives in full sun. This Coreopsis is beneficial to honeybees.

Mothers Day May 13!

Plants

Purple Coneflower flowers are a golden red to purple and may release a slight fragrance in strong sunlight. They are much-loved by bees! Blooms appear June-September and some may re-bloom in the fall. It matures to 4' in height. The preference is full or partial sun, and moist to medium conditions.

Showy Sunflower prefers full sun to partial shade. It matures at 5'. This plant prefers dry soil conditions. Yellow blooms are present in July, August and September.

False Sunflower thrives in wet to moist soil conditions in full to partial sun. This 5' plant produces yellow blooms in June through September. Easy to grow and quick to develop, this plant is one to include if planning for Monarchs.

Earth Day April 22!

Plants

Foxglove

Beardtongue is very adaptable to many light conditions, from full sun to partial shade. With a mature height of 3', this plant prefers medium to dry soil conditions. White to pink flowers occur in June and July. The tubular flowers attract butterflies and bees.

Smooth

Beardtongue is very similar to the Foxglove Beardtongue, but it can tolerate more shade. This plant prefers moist soil conditions and has pink flowers.

Rosinweed matures at 5' in full sun. This plant prefers moist to dry soil conditions. Yellow flowers occur in July through September. It attracts a variety of pollinators, especially honeybees. Rosinweed before flowering can be mistaken for Milkweed.

Plants

Virginia Mountain

Mint attracts many insects to its flowers, including various bees and small butterflies. The leaves are very fragrant and the flowers will be white to shades of light purple, blooming from June through September. This 3' plant does best in full sun to part shade and all soil types. This plant is a great choice for those who want to feed pollinators!

Royal Catchfly

prefers full to partial sun and moist soil conditions. Maturing at 4' tall, red blooms occur in July and August. Hummingbirds flock to this plant. Sticky glands cover the plant and small insects often become trapped, hence the name Catchfly.

Cardinal Flower

is named for its beautiful scarlet red flowers which are an important nectar source for hummingbirds and swallowtail butterflies. The 4' plant grows best in moist soil in full sun to partial shade and blooms from July to September. It is a showy plant that makes excellent cut flowers.

Plants

Anise Hyssop is 3' tall and prefers full to partial sun. It thrives in moist soil conditions. Purple blooms appear in June through September. This plant has very showy flowers and fragrant foliage. When the leaves are crushed, they smell like licorice. It is deer resistant. Honeybees, butterflies and hummingbirds love it!

Showy Black Eyed Susan likes wet to medium soils in full sun. At maturity the plant is 3' in height. The black centered yellow bloom occurs in August and September.

Obedient Plant thrives in wet soils growing 4' tall. Preferring full to partial sun, white or pink blooms occur in August and September. Individual flower stems will remain in whichever direction you point them in. The plant produces copious amounts of nectar. Blooming late summer into fall, this provides a much-needed boost of energy for pollinators before winter.

Plants

New England Aster maturing to 5' tall, it is rich with purple flowers with orange-yellow centers from late summer to October. Popular with pollinators, it thrives in full sun or light shade in all but the driest soils. The colors can vary from purple, violet, and lavender to all shades of pink. The nectar of the flower provides an excellent source for Monarchs and other butterflies. New England Aster is drought-tolerant and deer-resistant.

Smooth Blue Aster has a tough stem often takes on a shade of blue allowing it to stand tall during the long late summer to mid fall bloom. Maturing at 4' tall, blue flowers occur in August through October. This easy to grow plant prefers full sun and average to dry soil. Butterflies are attracted to the fall nectar provided by this Aster.

Purple Prairie Clover is a 2' tall plant with purple blooms in July through September. Thriving in moist to dry soils, it prefers full to partial sun. This easy growing plant is a staple legume in sunny, diverse plantings and is highly sought out by honeybees.
